

Serological evidence of Marburgviruses & Bundibugyo-like Ebolaviruses in Madagascan Rousettes

- Circulation and maintenance of emerging zoonotic viruses (filoviruses & henipaviruses) in reservoir populations (bats)
- Primary method: Multiplex serology-based (antibody detection) biosurveillance approach

What is the current circulation of filoviruses (marburgviruses included) in Madagascan rousettes on Madagascar?

E2M2: Demonstrate pattern(s) of circulation of a Bundibugyo-like ebolavirus and two separate, but related, marburgviruses
